Contact Tracing - Alert Level 2

Practitioners will no longer be required to notify their Responsible Authority for seeing clients/patients in-person in **Alert Level 2**

You are, however, required to keep a detailed record of all work related contacts you undertake, as well as your own personal social contacts. These records need to contain as much information as possible including:

- **The sources and settings where close contacts are occurring**
- **The timeliness of actions, and in particular the time intervals of symptoms**
- **Names of the people and how to contact them**
